All PacSeal Hydraulics' KR Pressure Regulators are designed with ShearFlo® metal-to-metal sealing technology. ShearFlo® sealing technology features:

- High cycle life and anti-wear design is suitable for critical service applications, including contaminated fluids.
- Leak proof, contaminant resistant metal-to-metal seal is accomplished by lapping and polishing hardened stainless steel sealing elements to exacting standards of finish and flatness.
- The sealing elements are spring preloaded and pressure energized, which maintains contact between the two sealing surfaces at all times.

All KR Regulators are tested to PacSeal's strict quality control standards to ensure proper function and reliability. Every ShearFlo® sealing component in a repair kit is inspected to ensure trouble-free performance after field maintenance and repair.

PacSeal Hydraulics' KR Pressure Regulators serve as pressure reducing and regulating valves to maintain system pressure at a desired value (set pressure) which is below that of the supply pressure.

The operator controls the outlet pressure by modulating the compression of springs that act on a pressurized piston. This in turn balances the hydraulic load inside the body. The operator options are as follows:

- Manual
- Failsafe Air Motor with Manual Override
- Failsafe Hydraulic Motor with Manual Override
- Hydraulic Pilot

The internal override bypass operator provides a lean solution for tight space applications by allowing full accumulator pressure to be supplied downstream of the regulator without a dedicated 4-way bypass valve in the hydraulic circuit.

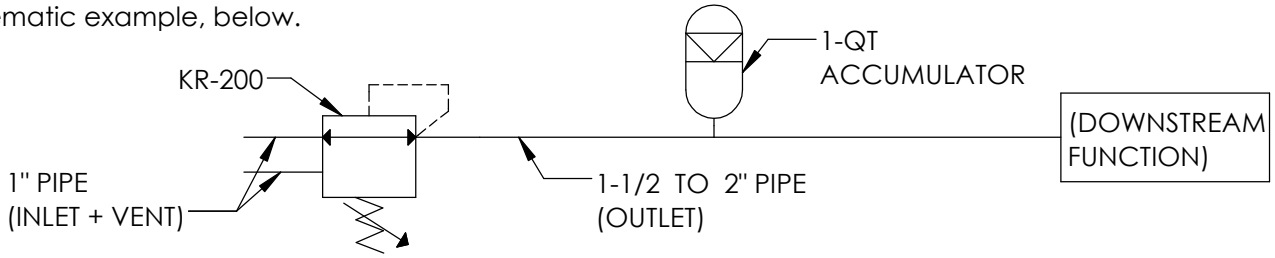
General Specifications	
Supply Port Size	1-1/4 in. NPT or SAE (2X)
Outlet Port Size	2 in. NPT or SAE
Vent Port Size	1 in. NPT or SAE (2X)
Working Pressure Options (Liquid)	3000, 5000, or 6000 psi
Regulated Outlet Pressure Options	See Product Configurator
Cv Factor Outlet	33
Cv Factor Vent	4.1
Rated Flow	300 gpm
Temperature Rating (Regulators and Failsafe Air Motors)	-40° to 250°F
Weight	See installation drawings
Materials	
ShearFlo Sealing Components (i.e. Rotor and Seal Rings)	Hardened Stainless Steel
Body	Stainless Steel
Flanges and Operators	Carbon Steel
Hardware	Coated Carbon Steel
O-rings	Buna-N (N), Viton (V), or EPR (E)
Backup Rings	Teflon

Model	Regulated Outlet Pressure [psi]	Deadand Range [psi]*
L	300-1800	100-150
D	500-3000	200-300
H	500-3300	100-150
W	700-4500	200-300
P	50-6000	0-100

*Deadband is the difference between the set pressure and the actual outlet pressure that triggers the KR to open. The deadband will vary depending on factors that influence the friction between the seal rings and flow plates. Namely, type of fluid and lubricity properties, temperature, differential pressure between supply and regulated outlet, seal ring and flow plate wear condition, and lastly interpretation influenced by gauge sensitivity.
The Reset Range or Hysteresis is within +/- 150 psi for all models.

Circuit Design Considerations

The KR-150, -175, and -200 regulators are subject to hammering if the outlet flow is restricted or not adequate to match the inlet flow rate. To prevent hammering, the downstream hydraulic circuit must have adequate flow; such that the pipe/hose diameter matches or is greater than that of the KR-150 outlet, there are little to no restrictions after the outlet (minimize bends, no check valves, no ball valves, etc.). To safeguard this further, an accumulator is recommended to be used just downstream, in close proximity to the regulator's outlet. See circuit schematic example, below.



System Start-up

Upon system start-up, there must be load on the pressure regulator piston to prevent hammering/shock that may damage the KR.

- For KR regulators with a manual operator, the top of the manual adjustment handle must be about 2-3/4 inches from the top of the adjustment head.
- For KR regulators with failsafe air/hydraulic remote operators, the top of the manual adjustment handle must be about 4-1/4 inches from the top of the adjustment head.
- For KR regulators with hydraulic pilot operators, there should be about 1500 psi (500 psi minimum) supplied to the pilot inlet.

Rated Regulated Outlet Pressure

KR pressure regulators are rated to output a regulated pressure range that is tested and verified prior to shipment. Operating at a pressure outside of this range is possible, but may diminish as the KR wears during service. 0 psi can be achieved by completely unloading the pressure adjustment (decompressing spring to its free state). To match the supply pressure, the pressure adjustment must be completely loaded (compressing springs to solid), which allows the supply pressure to free-flow through the regulator.

NOTE: Although 0 psi is the output, DO NOT attempt to perform maintenance or disassemble any components downstream of the KR while in this state.

To maximize the regulated outlet pressure range, the hydraulic pilot operator is the best option. This operator regulates pressure down to 50 psi and up to the supply pressure.

Set Pressure Adjustment

When the set pressure on a spring operator is being changed or adjusted, the outlet needs to be briefly opened and closed a few times to allow the operator and pressure to stabilize. This can be achieved by operating a manifold control valve or installing a separate, much smaller valve directly on the outlet line near the KR. The control valve should be briefly opened and closed after the KR has been adjusted; this will stabilize the pressure reading. Once satisfied with the set pressure, tighten the locking handle down to the adjustment head.

Avoid Series Installation

It is NOT recommended that KRs be installed in series (e.g. do NOT connect the outlet of one KR to the inlet of another). Doing so may prevent set pressure stabilization.

Pressure Relieving Feature

The KRs are designed to self-relieve (vent) at an over-pressurization condition to maintain the regulated set pressure. Thus, the vent port must always be connected without any restrictions and not joined with any other common returns to the reservoir or tank at ambient pressure (i.e. solo low pressure hydraulic hose or tubing from KR to tank) to ensure proper safety and function.

In the event of a supply seal ring or flow plate failure, the supply pressure will leak into the KR body through the vent seal ring port and then be directed to the reservoir or tank.

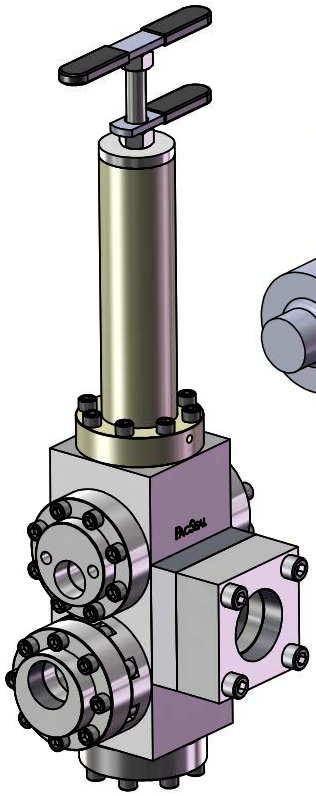
Model Number Configurator

Basic Model	Ports	Supply Pressure	Regulated Outlet Pressure: Operating Range[2]	Regulated Outlet Pressure: Deadband	Operator	Internal Override Bypass
KR-200	N NPT S SAE	3 3000 psi 5 5000 psi	L 300-1800 psi	100-150 psi	M Manual FSA Failsafe Air Motor	-IO Direct -IS with SV-25
	C Code-61[1] D Code-62[1]	5 5000 psi 6 6000 psi	D 500-3000 psi H 500-3300 psi	200-300 psi 100-150 psi	FSH Failsafe Hydraulic Motor	-IX with SVx-25
		6 6000 psi	W 700-4500 psi	200-300 psi		*Leave blank if N/A*
		3, 5, or 6	P[3] 50-6000 psi	0-100 psi	H Hydraulic Pilot	

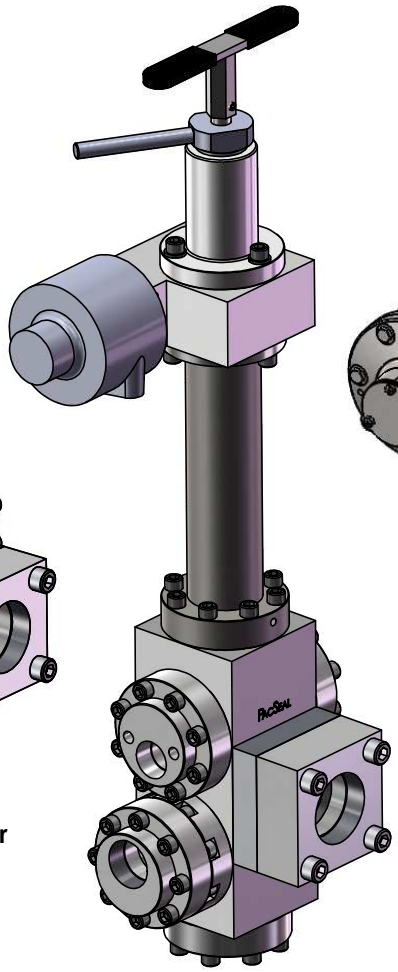
Notes: [1] *Not a standard option - special order only*

[2] *Regulated Outlet Pressure cannot exceed supply pressure. Absolute Outlet Pressure is 0 psi up to 25% above the maximum operating pressure.*

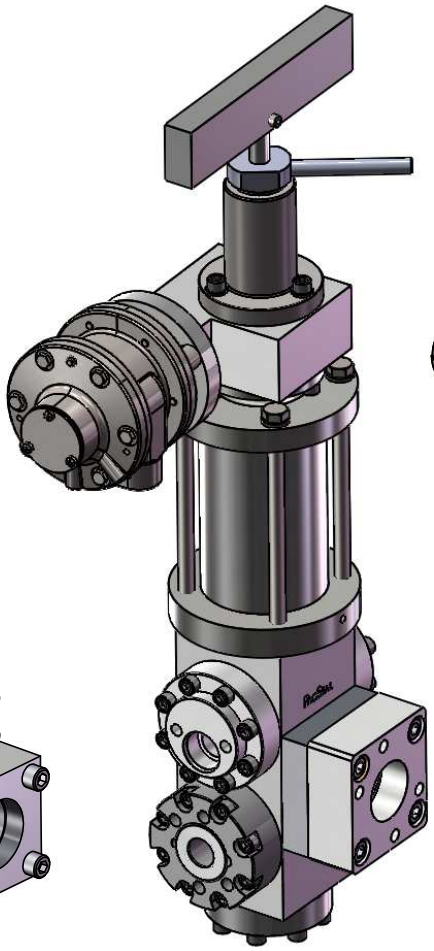
[3] *Maximum regulated outlet pressure matches the supply pressure for a regulator with the Hydraulic Pilot operator*



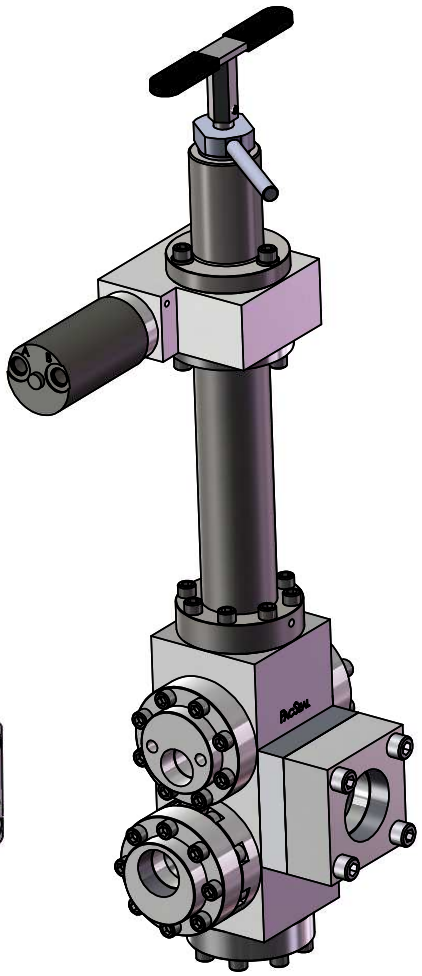
KR-200 Regulator with Manual Operator *(KR-200N3DM)*



KR-200 Regulator with Failsafe Air Motor Operator *(KR-200S3LFA)*



KR-200 Regulator with High Pressure Low Deadband and Failsafe Air Motor Operator *(KR-200C3HFSA)*



KR-200 Regulator with Failsafe Hydraulic Motor Operator *(KR-200N3DFSH)*

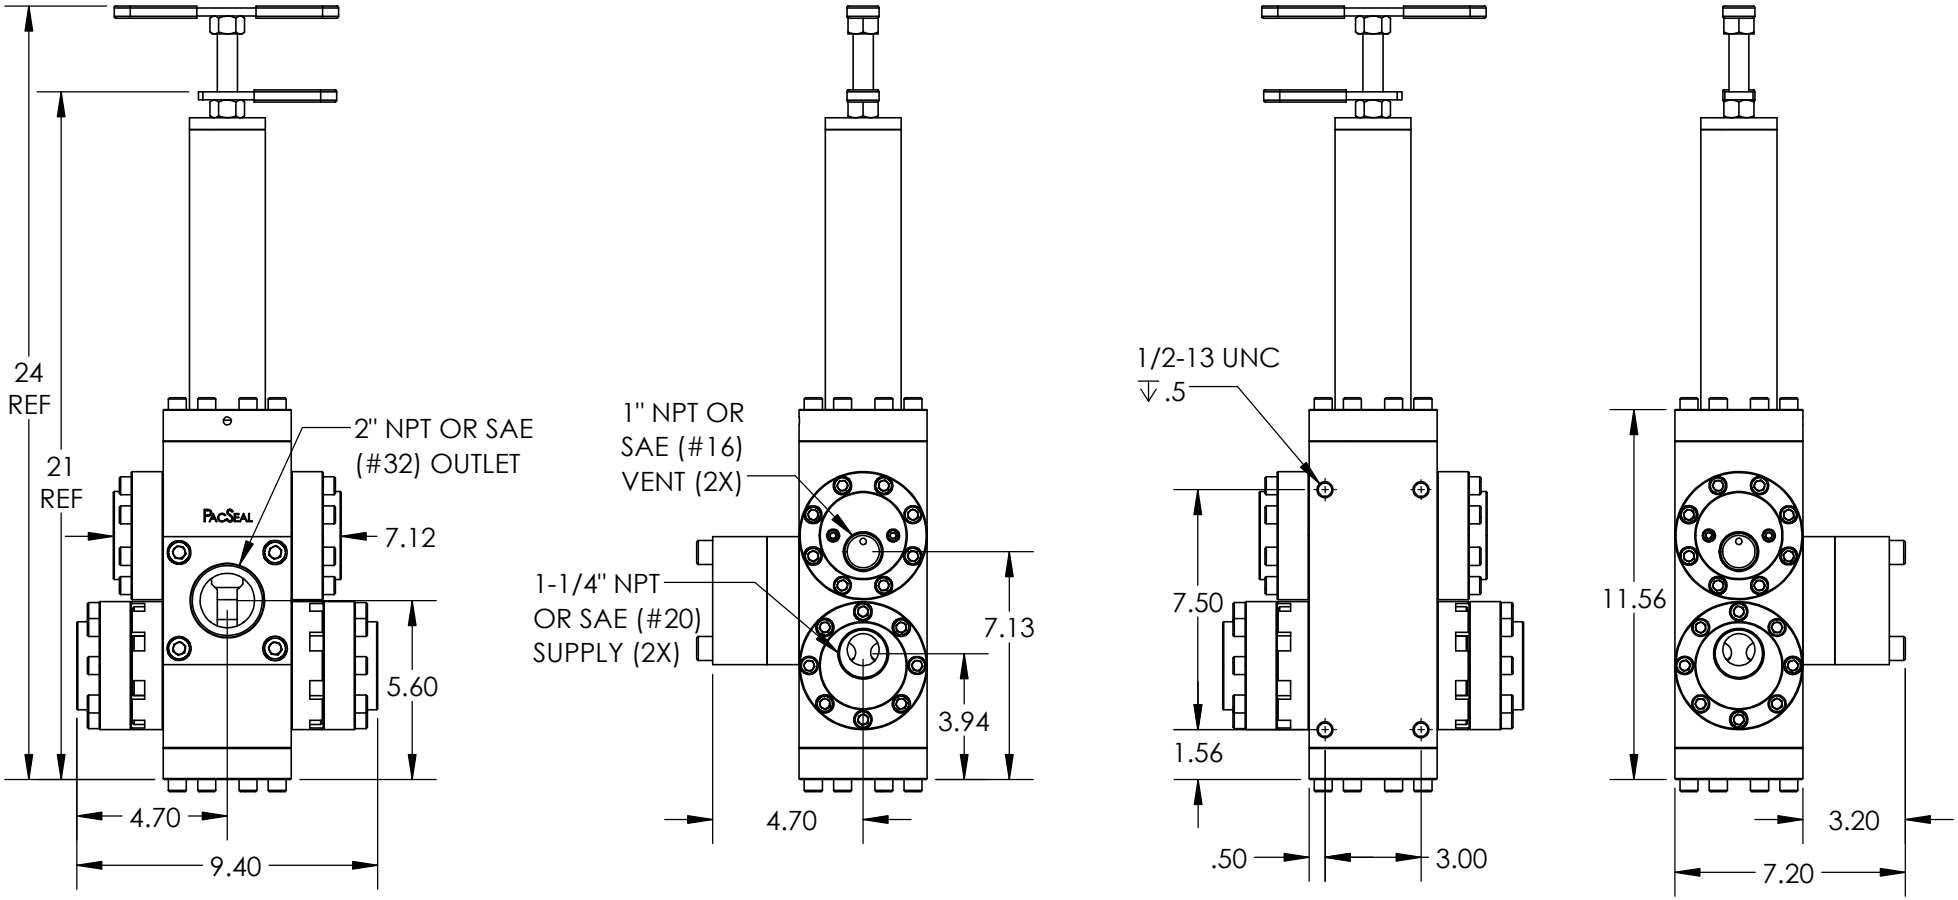
NOTES:

1. *Displayed models are just a few examples of the many potential configurations*

PACSEAL HYDRAULICS

TITLE: **Configuration Overview**

SIZE: A | REV: 2



Notes:

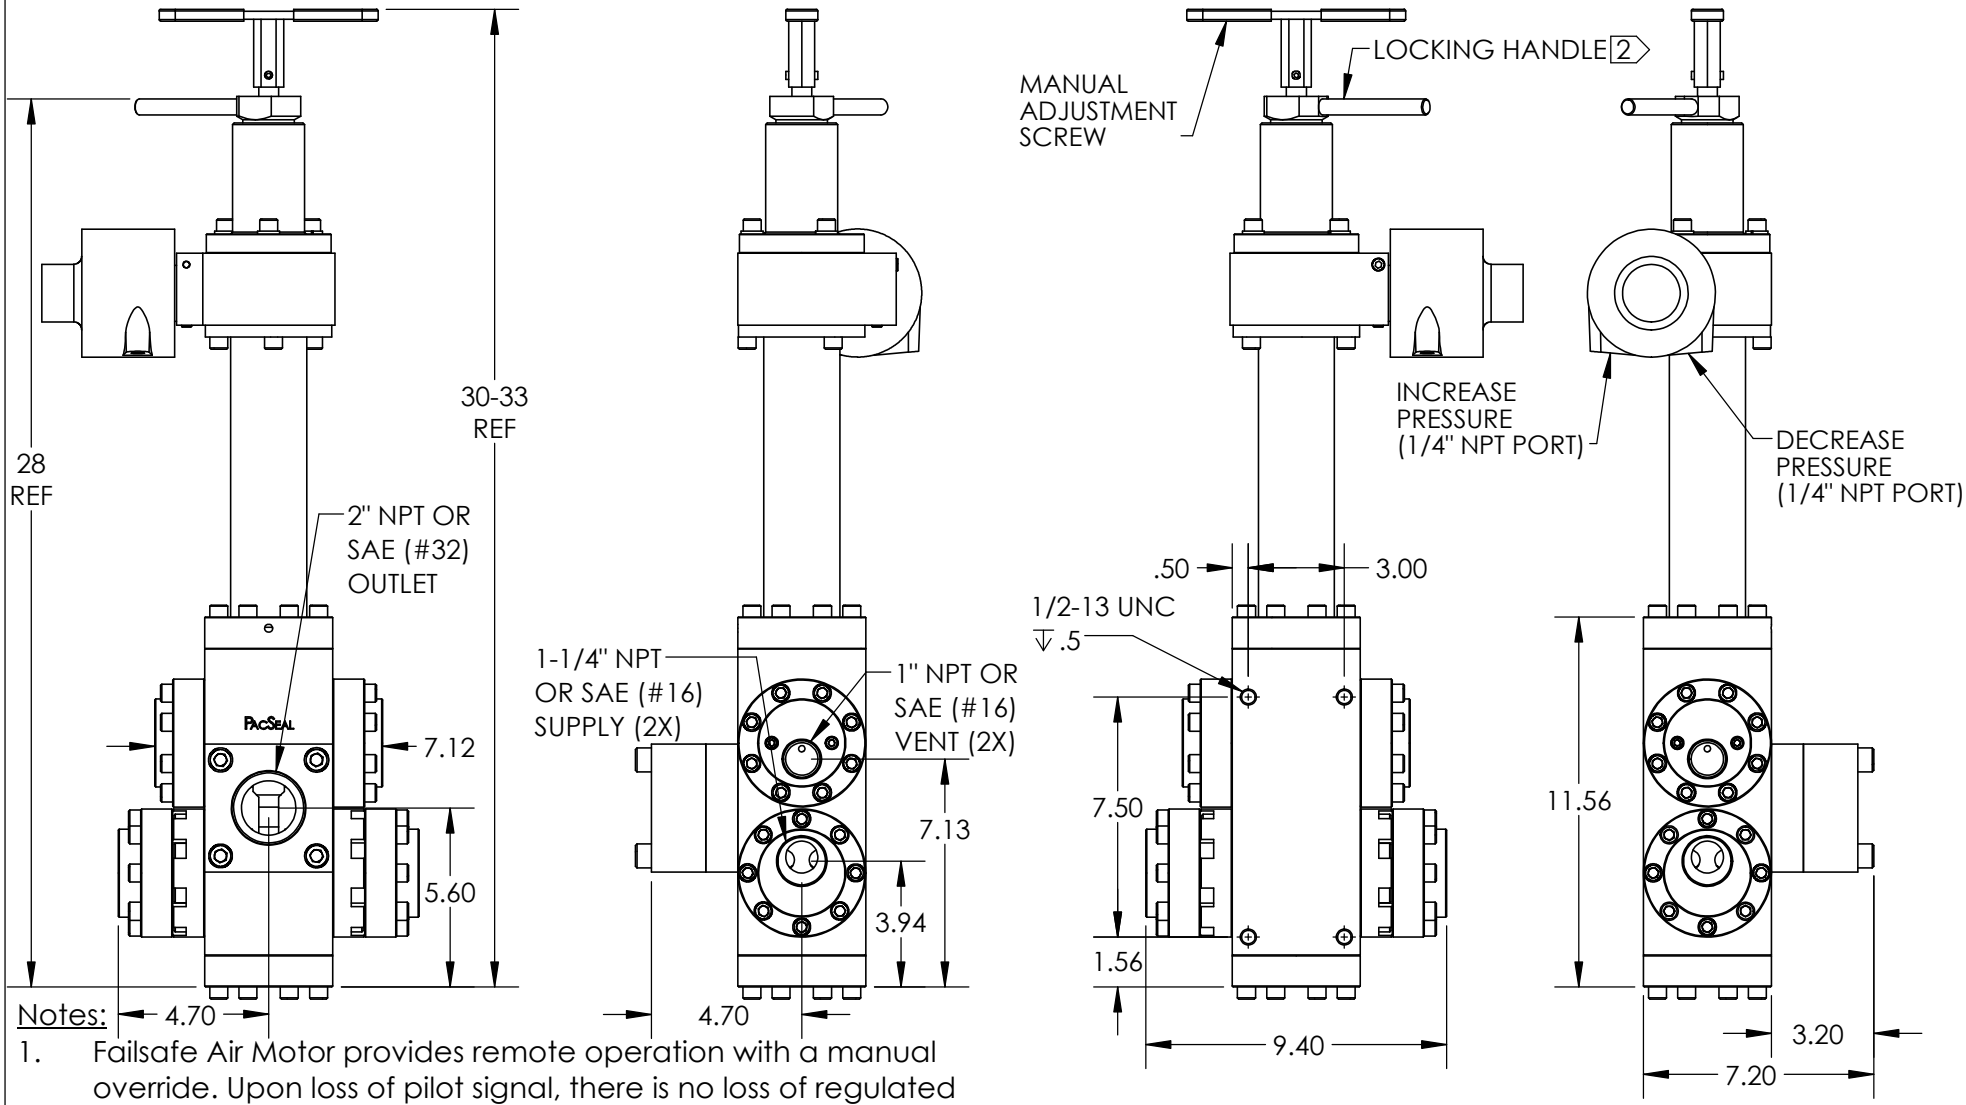
1. Adjustment handle can be threaded in or out to increase or decrease compression on the spring and thus on the regulated outlet pressure.
2. Model configuration (Regulated Outlet Pressure) options: L, D
3. Weight - 84 lb.
4. All dimensions are consistent for KR-200 NPT or SAE ORB porting options, regardless of supply/outlet pressure and operator selection.

PACSEAL HYDRAULICS

TITLE
Regulator w/ Manual Operator (NPT/SAE) Installation Drawing

SIZE A | REV 2

5 4 3 2 1



Notes:

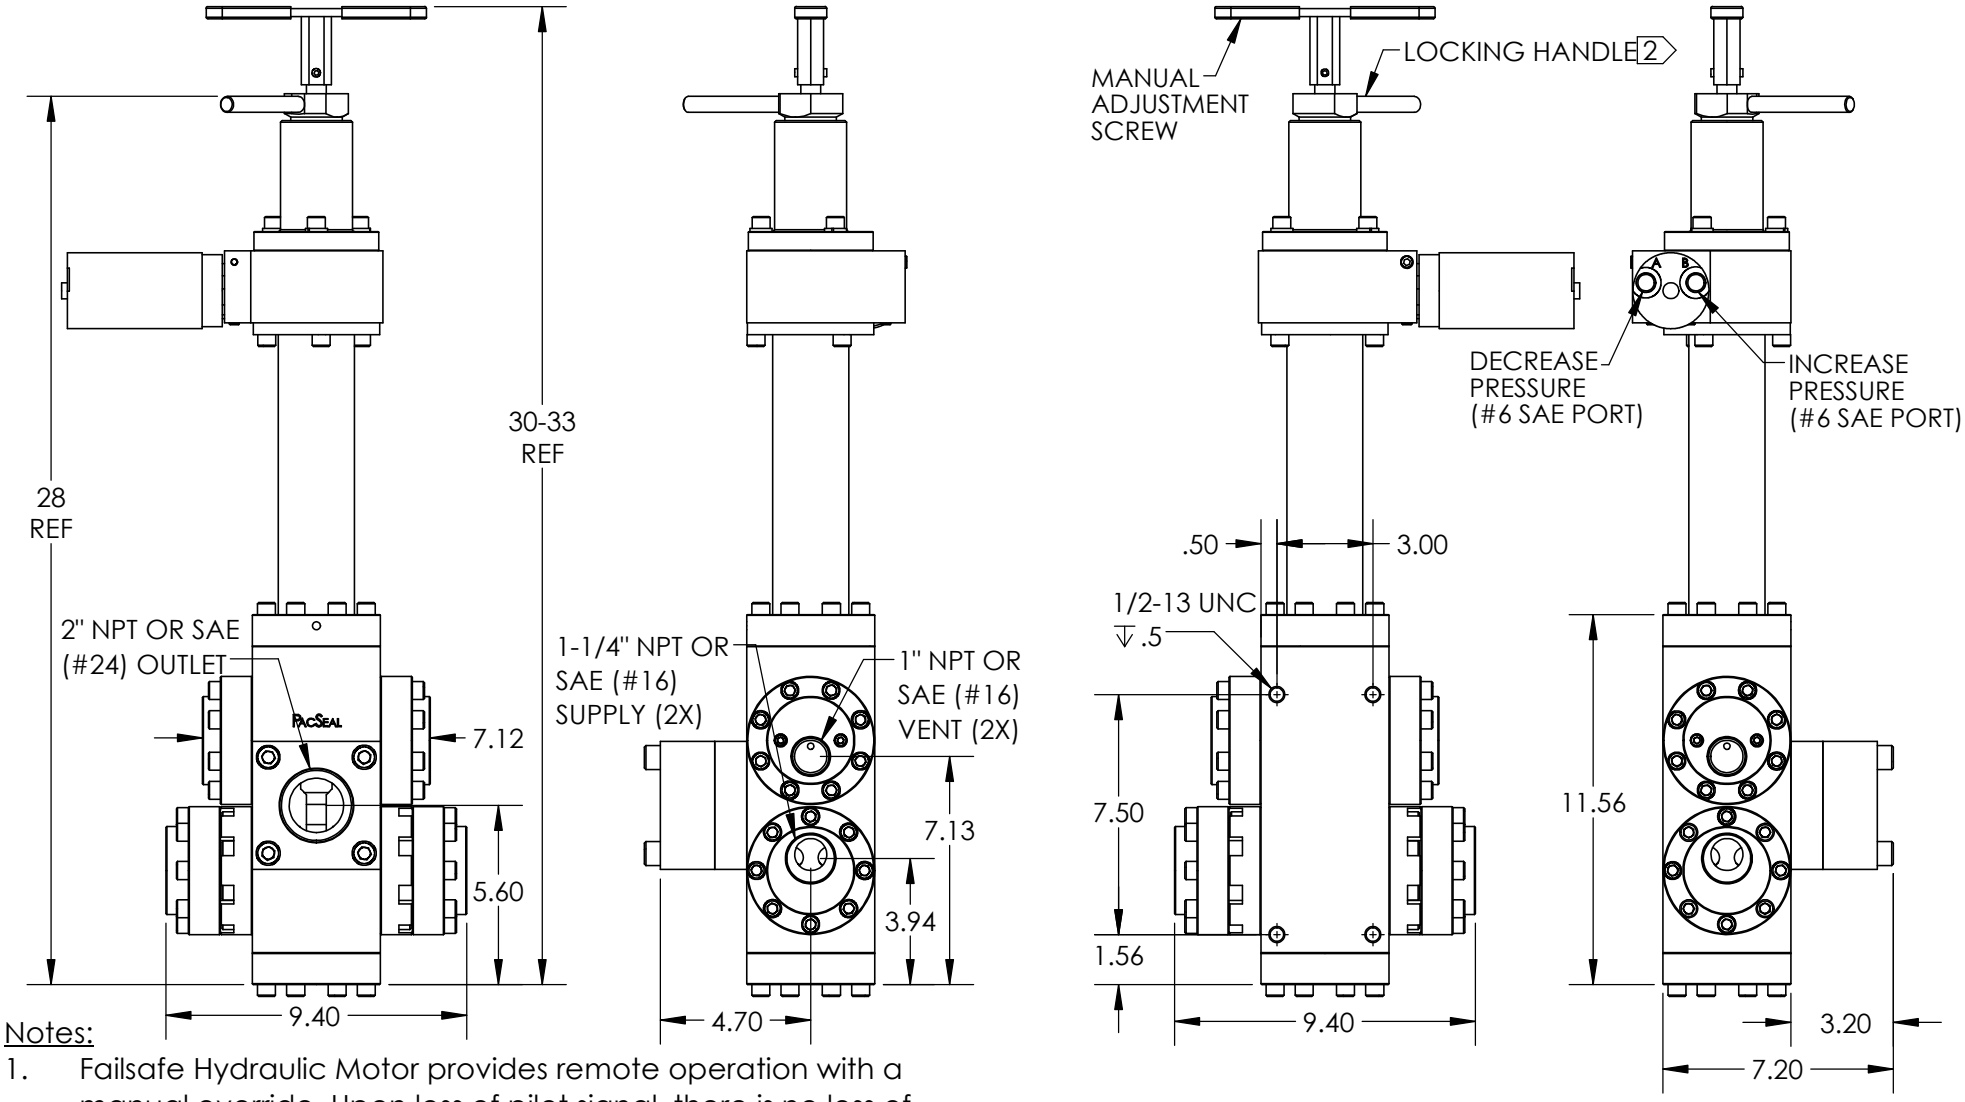
1. Failsafe Air Motor provides remote operation with a manual override. Upon loss of pilot signal, there is no loss of regulated outlet pressure.
2. Turn locking handle clockwise to lock for failsafe operation. Turn locking handle counter-clockwise to unlock for manual operation/override.
3. Recommended Air Supply - 80 to 130 psi.
4. Model configuration (Regulated Outlet Pressure) options: L, D
5. Weight - 113 lb.
6. All dimensions are consistent for KR-200 NPT or SAE ORB porting options, regardless of supply/outlet pressure and operator selection.

PACSEAL HYDRAULICS

TITLE
Regulator w/ Failsafe Air Operator (NPT/SAE) Installation Drawing

SIZE A | REV 2

5 4 3 2 1



Notes:

1. Failsafe Hydraulic Motor provides remote operation with a manual override. Upon loss of pilot signal, there is no loss of regulated outlet pressure.
2. Turn locking handle clockwise to lock for failsafe operation. Turn locking handle counter-clockwise to unlock for manual operation/override.
3. Max Hydraulic Motor Supply Pressure - 1500 psi
4. Model configuration (Regulated Outlet Pressure) options: L, D
5. Weight - 110 lb.
6. All dimensions are consistent for KR-200 NPT or SAE porting options, regardless of supply/outlet pressure and operator selection.
